

IAN MBURU

BSc Computer Technology | IT Support, Networks & Distributed Systems

kanyoroian@gmail.com | [linkedin.com/in/ian-mburu-19a388240](https://www.linkedin.com/in/ian-mburu-19a388240) | github.com/fo401 | fo401.github.io

PROFILE

Computer Technology graduate with hands-on experience keeping systems running in a high-traffic public service environment, and with building distributed software for settings where connectivity and infrastructure cannot be relied on. Comfortable across the stack that keeps an organisation working: network troubleshooting at LAN and WAN level, virtual desktop infrastructure, endpoint and printer deployment, and application development in Node.js. Open to roles in IT support, systems and network administration, data, and AI-adjacent engineering.

EXPERIENCE

IT Support Intern — Huduma Centre, Mombasa

Jun 2024 – Sep 2024

ICT Division, State Department for Public Service

- Diagnosed and resolved network faults at both LAN and WAN level, maintaining connectivity across a high-traffic public service centre.
- Administered virtual desktop infrastructure (VDI) supporting day-to-day staff operations.
- Installed and maintained operating systems, applications and software across staff workstations.
- Repaired and installed local and networked printers, and maintained data equipment and computer hardware.
- Provided frontline technical support to internal users, working to keep service counters operational during public hours.

Endorsed by centre management as dependable, self-driven and punctual, with strong team collaboration. Written reference available.

PROJECTS

Cold Chain Vaccine Monitoring and Alerting System

Final-year project

Hyperledger Fabric · CouchDB · Node.js · Africa's Talking SMS API

- Addressed vaccine spoilage caused by cold chain failures that go undetected in low-connectivity environments.
- Recorded storage conditions to a tamper-resistant distributed ledger, making the temperature history auditable rather than self-reported.
- Triggered real-time SMS alerts to field staff on threshold breach, so failures surface while the stock can still be recovered.

Vellum Archive — The Athenaeum

Personal project

Hand-written HTML/CSS · fo401.github.io/vellum

- A personal literary archive built as a single hand-authored HTML file with no framework or build step.
- Maintained to a zero-defect standard through recurring security and quality audits.

EDUCATION

BSc Computer Technology — Multimedia University of Kenya

Sep 2022 – Nov 2026

Final examinations completed June 2026; graduation November 2026

- Member, MMU Computing and Information Technology (CIT) Club.

CERTIFICATIONS

In progress: Cisco Certified Network Associate (CCNA); ISOC Network Professional

TECHNICAL SKILLS

Networking: LAN/WAN troubleshooting, network administration, structured diagnostics

Systems: Virtual desktop infrastructure (VDI), operating system deployment, endpoint and printer administration, hardware maintenance

Development: Node.js, JavaScript, HTML, CSS

Distributed systems: Hyperledger Fabric, CouchDB, ledger-backed data integrity

Integration: Africa's Talking SMS API, REST APIs

Tools: Git, GitHub, GitHub Pages
